HCL SOFTWARE | AppScan on Cloud

Security Report

Scan Name: DAST 2021-06-18 https://sre-console.aiops.cloud.ibm.com/sre-console/clusters?clusterFilter=c34vuh5w0op1v870vnqg

Technology: DAST

Report Name: Report_DAST 2021-06-18 https_sre-console.aiops.cloud.ibm.com_sre-console_clusters_cl

Report created at: Thursday, June 24, 2021

Summary of security issues

Medium severity issues:	4
Low severity issues:	64
Informational severity issues:	5
Total security issues:	**73**

Scan Information

Scan started: Friday, June 18, 2021 2:34:42 PM (UTC)

Test policy: Default (Production)

Test Optimization: Fast

Hosts

Host: sre-console.aiops.cloud.ibm.com

Port: 443

Operating system: GeneralInformation.Unknown

Web server: GeneralInformation.Unknown

Application Server: GeneralInformation.Any

Login Settings

Login method: dictionaryNone

Table of Contents

Summary

- Issues

Issue Types

- Missing Secure Attribute in Encrypted Session (SSL) Cookie
- Weak Cipher Suites - ROBOT Attack : Vulnerable cipher suites are supported by the server
- Weak cipher suites were detected : Perfect Forward Secrecy is not supported
- Cookie with Insecure or Improper or Missing SameSite attribute
- Hidden Directory Detected
- Missing or insecure "X-XSS-Protection" header
- SHA-1 cipher suites were detected
- Email Address Pattern Found
- Missing "Content-Security-Policy" header
- Possible Server Path Disclosure Pattern Found

How to Fix

- Missing Secure Attribute in Encrypted Session (SSL) Cookie
- Weak Cipher Suites detected : Vulnerable cipher suites are supported by the server
- Weak cipher suites were detected : PFS is not supported
- SameSite Cookie References
- Hidden Directory Detected
- Missing or insecure "X-XSS-Protection" header
- SHA-1 cipher suites were detected
- Email Address Pattern Found
- Missing "Content-Security-Policy" header
- Possible Server Path Disclosure Pattern Found

Summary

Total security issues: **73**

Issue Types: **10**

	Number of Issues
Missing Secure Attribute in Encrypted Session (SSL) Cookie	2
Weak Cipher Suites - ROBOT Attack : Vulnerable cipher suites are supported by the server	1
Weak cipher suites were detected : Perfect Forward Secrecy is not supported	1
Cookie with Insecure or Improper or Missing SameSite attribute	3
Hidden Directory Detected	59
Missing or insecure "X-XSS-Protection" header	1
SHA-1 cipher suites were detected	1
Email Address Pattern Found	3
Missing "Content-Security-Policy" header	1
Possible Server Path Disclosure Pattern Found	1

Critical High Medium Low Informational

Issues - By Issue Types:

M	DAST: Missing Secure Attribute in Encrypted Session (SSL) Cookie 2

How to Fix: Missing Secure Attribute in Encrypted Session (SSL) Cookie

Issue 1 of 2

Issue ID:	d34c236a-48d0-eb11-a7ad-2818780a4811
Severity:	Medium
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/
Domain	sre-console.aiops.cloud.ibm.com
Element	KUI_PROXY_COHOSTED
Path	/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	6.4
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	614
Threat Classification:	Information Leakage
Risk:	It may be possible to steal user and session information (cookies) that was sent during an encrypted session
Causes:	The web application sends non-secure cookies over SSL

Issue 1 of 2 - Details

Reasoning: AppScan found that an encrypted session (SSL) is using a cookie without the "secure" attribute.

Test Requests and Responses:

Domain	sre-console.aiops.cloud.ibm.com
CVSS	6.4
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
Threat Classification:	Server Misconfiguration
Risk:	An attacker can obtain the decrypted RSA ciphertext or sign an arbitrary message with server's private key.
Causes:	The web server or application server with TLS implementation flaw may be vulnerable to ROBOT Attack. This issue does not necessarily mean that you are vulnerable. Please follow the advisory guideline.

Issue 1 of 1 - Details

Reasoning: AppScan determined that the site uses weak cipher suites by successfully creating SSL connections using each of the weak cipher suites listed here.

Test Requests and Responses:

L DAST: Cookie with Insecure or Improper or Missing SameSite attribute 3

How to Fix: SameSite Cookie References

Issue 1 of 3

Issue ID:	d94c236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/
Domain	sre-console.aiops.cloud.ibm.com
Element	_csrf
Path	/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	4.1
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	1275
Threat Classification:	Information Leakage
Risk:	Prevent Cookie information leakage by restricting cookies to first-party or same-site contextAttacks can extend to Cross-Site-Request-Forgery (CSRF) attacks if there are no additional protections in place (such as Anti-CSRF tokens).
Causes:	Sensitive Cookie with Improper or Insecure or Missing SameSite Attribute

Issue 1 of 3 - Details

Reasoning: The response contains Sensitive Cookie with Insecure or Improper or Missing SameSite attribute, which may lead to Cookie information leakage, which may extend to Cross-Site-Request-Forgery(CSRF) attacks if there are no additional protections in place.

Test Requests and Responses:

How to Fix: Hidden Directory Detected

Issue 1 of 59

Issue ID:	664d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.db/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 1 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.db/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```
GET /sre-console/.db/ HTTP/1.1
```

```

Issue 6 of 59

Issue ID:	754d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.default/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 6 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.default/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 10 of 59

Issue ID:	7e4d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.cache/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 10 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.cache/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This

indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 14 of 59

Issue ID:	a24d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.GitLab/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 14 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.GitLab/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 18 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.dev/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 23 of 59

Issue ID:	eb4c236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.pas/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 23 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.pas/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 27 of 59

Issue ID:	0c4d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.sploits/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 27 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.sploits/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```
GET /sre-console/.sploits/ HTTP/1.1

Issue 31 of 59

Issue ID:	164d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.sav/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 31 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.sav/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This

indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 35 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.profile/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 40 of 59

Issue ID:	224d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.001/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 40 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.001/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This

indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 44 of 59

Issue ID:	494d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.7z/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 44 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.7z/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 48 of 59

Issue ID:	384d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.1/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 48 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.1/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 52 of 59

Issue ID:	594d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.config/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 52 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.config/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This

indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

Issue 57 of 59

Issue ID:	094d236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/
Domain	sre-console.aiops.cloud.ibm.com
Element	.rhosts/
Path	/sre-console/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site
Causes:	The web server or application server are configured in an insecure way

Issue 57 of 59 - Details

Difference: **Path** manipulated from: /sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js to: /sre-console/.rhosts/

Reasoning: AppScan requested a file which is probably not a legitimate part of the application. The response status was 200 OK. This indicates that the test succeeded in retrieving the content of the requested file.

Test Requests and Responses:

```

L DAST: Missing or insecure "X-XSS-Protection" header 1

How to Fix: Missing or insecure "X-XSS-Protection" header

Issue 1 of 1

Issue ID:	cc4c236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/
Domain	sre-console.aiops.cloud.ibm.com
Element	sre-console.aiops.cloud.ibm.com
Path	/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	5.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to gather sensitive information about the web application such as usernames, passwords, machine name and/or sensitive file locationsIt is possible to persuade a naive user to supply sensitive information such as username, password, credit card number, social security number etc.
Causes:	Insecure web application programming or configuration

Issue 1 of 1 - Details

Reasoning: AppScan detected that the X-XSS-Protection response header is missing or with an insecure value, which may allow Cross-Site Scripting attacks

Test Requests and Responses:

```
GET /sre-console/login HTTP/1.1
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; Trident/7.0; rv:11.0) like Gecko

L DAST: SHA-1 cipher suites were detected 1

How to Fix: SHA-1 cipher suites were detected

Issue 1 of 1

Issue ID:	ae4c236a-48d0-eb11-a7ad-2818780a4811
Severity:	Low
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js
Domain	sre-console.aiops.cloud.ibm.com
Element	sre-console.aiops.cloud.ibm.com
Path	/sre-console/dll.vendorhcm.764a6b33e90f6ae212f7.js
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	4.3
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	327
Threat Classification:	Server Misconfiguration
Risk:	It may be possible to steal or manipulate customer session and cookies, which might be used to impersonate a legitimate user, allowing the hacker to view or alter user records, and to perform transactions as that user
Causes:	The web server or application server are configured in an insecure way

Issue 1 of 1 - Details

Reasoning: AppScan determined that the site uses weak cipher suites by successfully creating SSL connections using each of the weak cipher suites listed here.

Test Requests and Responses:

Issue 3 of 3

Issue ID:	c04c236a-48d0-eb11-a7ad-2818780a4811
Severity:	**Informational**
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/nls/platform.js
Domain	sre-console.aiops.cloud.ibm.com
Element	platform.js
Path	/sre-console/nls/platform.js
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	0.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	359
Threat Classification:	Information Leakage
Risk:	It is possible to gather sensitive information about the web application such as usernames, passwords, machine name and/or sensitive file locations
Causes:	Insecure web application programming or configuration

Issue 3 of 3 - Details

Reasoning: The response contains an e-mail address that may be private.

Test Requests and Responses:

I DAST: Missing "Content-Security-Policy" header 1

How to Fix: Missing "Content-Security-Policy" header

Issue 1 of 1

Issue ID:	af4c236a-48d0-eb11-a7ad-2818780a4811
Severity:	**Informational**
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/
Domain	sre-console.aiops.cloud.ibm.com
Element	sre-console.aiops.cloud.ibm.com
Path	/
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	0.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	1032
Threat Classification:	Information Leakage
Risk:	It is possible to gather sensitive information about the web application such as usernames, passwords, machine name and/or sensitive file locationsIt is possible to persuade a naive user to supply sensitive information such as username, password, credit card number, social security number etc.The absence or improper values of CSP can cause the web application being vulnerable to XSS, clickjacking, etc.
Causes:	Insecure web application programming or configuration

Issue 1 of 1 - Details

Reasoning: AppScan detected that the Content-Security-Policy response header is missing or with an insecure policy, which increases exposure to various cross-site injection attacks

Test Requests and Responses:

I DAST: Possible Server Path Disclosure Pattern Found 1

How to Fix: Possible Server Path Disclosure Pattern Found

Issue 1 of 1

Issue ID:	cf4c236a-48d0-eb11-a7ad-2818780a4811
Severity:	**Informational**
Status	New
Classification	Definitive
Location	https://sre-console.aiops.cloud.ibm.com/sre-console/js/mainvendors.5ad5a3a41ef49e7aac72.min.js
Domain	sre-console.aiops.cloud.ibm.com
Element	mainvendors.5ad5a3a41ef49e7aac72.min.js
Path	/sre-console/js/mainvendors.5ad5a3a41ef49e7aac72.min.js
Scheme	https
Domain	sre-console.aiops.cloud.ibm.com
CVSS	0.0
Date Created	Friday, June 18, 2021
Last Updated	Friday, June 18, 2021
CWE:	200
Threat Classification:	Information Leakage
Risk:	It is possible to retrieve the absolute path of the web server installation, which might help an attacker to develop further attacks and to gain information about the file system structure of the web application
Causes:	Latest patches or hotfixes for 3rd. party products were not installed

Issue 1 of 1 - Details

Reasoning: The response contains the absolute paths and/or filenames of files on the server.

Test Requests and Responses:

How to Fix

M Missing Secure Attribute in Encrypted Session (SSL) Cookie

Risk

It may be possible to steal user and session information (cookies) that was sent during an encrypted session

During the application test, it was detected that the tested web application set a cookie without the "secure" attribute, during an encrypted session. Since this cookie does not contain the "secure" attribute, it might also be sent to the site during an unencrypted session. Any information such as cookies, session tokens or user credentials that are sent to the server as clear text, may be stolen and used later for identity theft or user impersonation.

In addition, several privacy regulations state that sensitive information such as user credentials will always be sent encrypted to the web site

Cause

The web application sends non-secure cookies over SSL

Recommendations

Basically the only required attribute for the cookie is the "name" field. Common optional attributes are: "comment", "domain", "path", etc.

The "secure" attribute must be set accordingly in order to prevent to cookie from being sent unencrypted.

For more information on how to set the secure flag, see OWASP "Secure Attribute" cheatsheet at

https://cheatsheetseries.owasp.org/cheatsheets/Session_Management_Cheat_Sheet.html#secure-attributehttps://cheatsheetseries.owasp.org/cheatsheets/Session_Management_Cheat_Sheet.html#secure-attributeexternal

RFC 2965 states:

"The Secure attribute (with no value) directs the user agent to use only (unspecified) secure means to contact the origin server whenever it sends back this cookie, to protect the confidentially and authenticity of the information in the cookie."

For further reference please see the HTTP State Management Mechanism RFC 2965 at:

http://www.ietf.org/rfc/rfc2965.txthttp://www.ietf.org/rfc/rfc2965.txtexternal

and for "Best current practice" for use of HTTP State Management please see

http://tools.ietf.org/html/rfc2964http://tools.ietf.org/html/rfc2964external

M Weak Cipher Suites detected : Vulnerable cipher suites are supported by the server

Risk

An attacker can obtain the decrypted RSA ciphertext or sign an arbitrary message with server's private key.

Cipher Suites that support TLS-RSA key exchange were detected.

"ROBOT - Return Of Bleichenbacher's Oracle Threat" attack applies to the TLS-RSA key exchange, which is used by all

cipher suites names starting with TLS_RSA. An attack may exploit a vulnerable server that responds with different

messages based on the ciphertext validity. The attack relies on the flexibility of RSA that allows anybody with an RSA public

key to multiply encrypted plaintexts and on PKCS #1 v1.5 padding format that enables an attacker to create valid messages with a high probability.

A host with a flaw in TLS implementation that supports TLS cipher modes that use RSA encryption (TLS_RSA ciphers) is vulnerable to ROBOT Attack.

This attack allows an attacker to decrypt the recorded traffic of a vulnerable host.

Please take a look at "Affected Products" section, where products and available patches are specified.

Note: the patches and affected products list may change from time to time. For more information on patches and affected products please visit

ROBOT Attack patcheshttps://robotattack.org/#patchesexternal

Cause

The web server or application server with TLS implementation flaw may be vulnerable to ROBOT Attack. This issue does not necessarily mean that you are vulnerable. Please follow the advisory guideline.

Recommendations

In case you are using a vulnerable product listed in the "Affected Products" available at the bottom of the "Advisory" tab. Please check for patches and updates,

for a patches list and vulnerable products please visit :

ROBOT Attack patcheshttps://robotattack.org/#patchesexternal

It is also recommended to fully deprecate RSA encryption-based key exchanges in TLS because it does not provide Forward Secrecy.

M Weak cipher suites were detected : PFS is not supported

Risk

An attacker can decrypt a secure communication by generating a secret key once host's private key is compromised

AppScan detected weak cipher suites that do not support PFS - Perfect Forward Secrecy

When PFS is not supported by the host, in most cases when a Client establishes a connection to the Server, Client is using Server's Public Key

to encrypt the pre-master secret which then sent to the Server. Then the server uses it's Private Key to decrypt the pre-master secret so

the Client and the Server can generate the Session Key using the pre-master secret.

If the host's private key is compromised, an attacker can decrypt the pre-master secret and later generate the Secret Key

that is used for secure communication. This is possible because no unique session key is generated for every single communication session between

Client and the Server. Such communication can be achieved for example when DHE - Diffie-Hellman Ephemeral or ECDHE -

Elliptic Curve Diffie-Hellman Ephemeral key exchanges are used.

With PFS every new session between the Client and the Server new random keys are generated to create a pre-master secret. So even if one of the Keys is compromised

an attacker can compromise only one session between the Client and the Server and not all of the previous communication sessions.

Cause

The web server or application server are configured in an insecure way

Recommendations

Suport PFS by using cipher suites with ECDHE - Elliptic Curve Diffie-Hellman Ephemeral and DHE - Diffie-Hellman Ephemeral key exchanges.

L SameSite Cookie References

Risk

Prevent Cookie information leakage by restricting cookies to first-party or same-site context

Attacks can extend to Cross-Site-Request-Forgery (CSRF) attacks if there are no additional protections in place (such as Anti-CSRF tokens).

The SameSite attribute controls how cookies are sent for cross-domain requests.

The attribute may have three values: 'Lax', 'Strict', or 'None'. If 'None' is used, a website may create a cross-domain POST HTTP request to another website, and the browser automatically adds cookies to this request.

This may lead to Cross-Site-Request-Forgery (CSRF) attacks if there are no additional protections in place (such as Anti-CSRF tokens).

Modes and their uses:

'Lax' mode: the cookie will only be sent with a top-level get request.

'Strict' mode; the cookie will not be sent with any cross-site usage even if the user follows a link to another website.

'None' mode: the cookie will be sent with the cross-site requests.

The attribute having: 'Lax' or 'None' must have 'Secure' Flag set and must be transferred over https.

Example - Set-Cookie: key=value; SameSite=Lax;Secure

Setting attribute to 'Strict' is the recommended option.

Example - Set-Cookie: key=value; SameSite=Strict

Cause

Sensitive Cookie with Improper or Insecure or Missing SameSite Attribute

Recommendations

[1] Review possible solutions for configuring SameSite Cookie attribute to recommended values.

[2] Restrict Cookies to a first-party or same-site context.

[3] Verify and set the SameSite attribute of your cookie to Strict, to ensure that the cookie will only be sent in a first-party context.

[4] Or, if you want to relax the restrictions of first-party context, then verify and set the SameSite attribute of the cookie to Lax with Secure Flag enabled and transferred over HTTPS.

L Hidden Directory Detected

Risk

It is possible to retrieve information about the site's file system structure, which may help the attacker to map the web site

The web application has exposed the presence of a directory in the site. Although the directory does not list its content, the information may help an attacker to develop further attacks against the site. For example, by knowing the directory name, an attacker can guess its content type and possibly file names that reside in it, or sub directories under it, and try to access them.

The more sensitive the content is, the more severe this issue may be.

Cause

The web server or application server are configured in an insecure way

Recommendations

If the forbidden resource is not required, remove it from the site.

If possible, issue a "404 - Not Found" response status code instead of "403 - Forbidden". This change will obfuscate the presence of the directory in the site, and will prevent the site structure from being exposed.

CWE

200

L Missing or insecure "X-XSS-Protection" header

Risk

It is possible to gather sensitive information about the web application such as usernames, passwords, machine name and/or sensitive file locations

It is possible to persuade a naive user to supply sensitive information such as username, password, credit card number, social security number etc.

The "X-XSS-Protection" header with value '1' forces the Cross-Site Scripting filter into Enable mode, even if disabled by the user.

This filter is built into most recent web browsers (IE 8+, Chrome 4+), and is usually enabled by default. Although it is not designed as first and only defense against Cross-Site Scripting, it acts as an additional layer of protection.

Cause

Insecure web application programming or configuration

Recommendations

Configure your server to send the "X-XSS-Protection" header with value "1" (i.e. Enabled) on all outgoing requests.

For Apache, see:

http://httpd.apache.org/docs/2.2/mod/mod_headers.htmlhttp://httpd.apache.org/docs/2.2/mod/mod_headers.htmlexternal

For IIS, see:

L SHA-1 cipher suites were detected

Risk

It may be possible to steal or manipulate customer session and cookies, which might be used to impersonate a legitimate user, allowing the hacker to view or alter user records, and to perform transactions as that user

The server supports SHA-1 ciphersuites.

SHA-1 was officially deprecated by NIST in 2011, but many applications still rely on it.

Up until now (2021), only theoretical attacks have been known agsinst SHA-1, which is why many applications still rely on it.

Recently, a practical attack was introduced by CWI Amsterdam and Google Research teams ([1] and [2]).

Cause

The web server or application server are configured in an insecure way

Recommendations

Secure Cipher-Suites best practices:

[1]

Use strong cryptographic hashing algorithmshttps://cheatsheetseries.owasp.org/cheatsheets/Transport_Layer_Protection_Cheat_Sheet.html#use-strong-cryptographic-hashing-algorithmsexternal

I Email Address Pattern Found

Risk

It is possible to gather sensitive information about the web application such as usernames, passwords, machine name and/or sensitive file locations

Spambots crawl internet sites, set out to find e-mail addresses in order to build mailing lists for sending unsolicited e-mail (spam).

AppScan detected a response containing one or more e-mail addresses, which may be exploited to send spam mail

Furthermore, the e-mail addresses found may be private and thus should not be accessible to the general public.

Cause

Insecure web application programming or configuration

Recommendations

Remove any e-mail addresses from the website so that they won't be exploited by malicious users.

I Missing "Content-Security-Policy" header

Risk

It is possible to gather sensitive information about the web application such as usernames, passwords, machine name and/or sensitive file locations

It is possible to persuade a naive user to supply sensitive information such as username, password, credit card number, social security number etc.

The absence or improper values of CSP can cause the web application being vulnerable to XSS, clickjacking, etc.

The "Content-Security-Policy" header is designed to modify the way browsers render pages, and thus to protect from various cross-site injections, including Cross-Site Scripting. It is important to set the header value correctly, in a way that will not prevent proper operation of the web site. For example, if the header is set to prevent execution of inline JavaScript, the web site must not use inline JavaScript in its pages.

To protect against Cross-Site Scripting, Cross-Frame Scripting and clickjacking, it is important to set the following policies with proper values:

Both of 'default-src' and 'frame-ancestors' policies, *OR* all of 'script-src', 'object-src' and 'frame-ancestors' policies.

For 'default-src', 'script-src' and 'object-src', insecure values such as '*', 'data:', 'unsafe-inline' or 'unsafe-eval' should be avoided.

For 'frame-ancestors', insecure values such as '*' or 'data:' should be avoided.

Please refer the following links for more information.

Please note that “Content-Security-Policy” includes four different tests. A general test that verifies if the "Content-Security-Policy" header is being used and three additional tests that check if "Frame-Ancestors", "Object-Src" and "Script-Src" were configured correctly.

Cause

Insecure web application programming or configuration

Recommendations

Configure your server to send the "Content-Security-Policy" header.

It is recommended to configure Content-Security-Policy header with secure values for its directives as below:

For 'default-src', 'script-src' and 'object-src', secure values such as 'none', 'self', https://any.example.com and 'unsafe-inline' or 'unsafe-eval' with nonce or hash-algorithm were expected.

For 'frame-ancestors', secure values such as 'self', 'none' or https://any.example.com were expected.

For Apache, see:

http://httpd.apache.org/docs/2.2/mod/mod_headers.htmlhttp://httpd.apache.org/docs/2.2/mod/mod_headers.htmlexternal

For IIS, see:

https://technet.microsoft.com/pl-pl/library/cc753133%28v=ws.10%29.aspxhttps://technet.microsoft.com/pl-pl/library/cc753133%28v=ws.10%29.aspxexternal

I Possible Server Path Disclosure Pattern Found

Risk

It is possible to retrieve the absolute path of the web server installation, which might help an attacker to develop further attacks and to gain information about the file system structure of the web application

AppScan detected a response containing a file's absolute path (e.g. c:\dir\file in Windows, or /dir/file in Unix).

An attacker may be able to exploit this information to access sensitive information on the directory structure of the server machine which could be used for further attacks against the site.

Cause

Latest patches or hotfixes for 3rd. party products were not installed

Recommendations

There are several mitigation techniques:

[1] In case the vulnerability is in the application itself, fix the server code so it doesn't include file locations in any output.

[2] Otherwise, if the application is in a 3rd party product, download the relevant security patch depending on the 3rd party product you are using on your web server or web application.
